

Kuwait City, Kuwait January 2017

Is there a global need for CKD screening programs? Integrated Approaches to Kidney Health

Adeera Levin MD FRCPC CM

University of British Columbia Vancouver Canada

BC Provincial Renal

President International Society of Nephrology

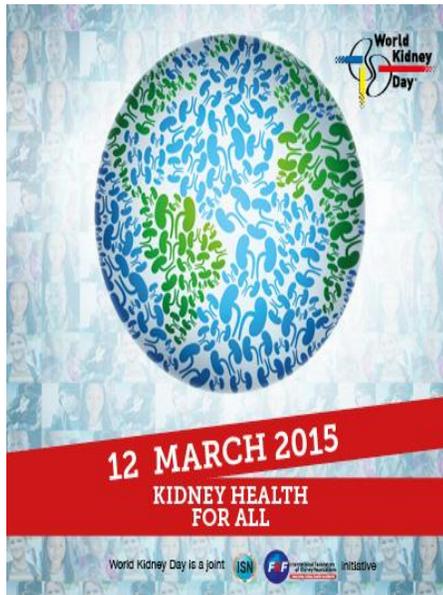

Overview

- What we know
 - Global burden of CKD
 - Variation in prevalence, incidence and treatments
- Universal health coverage and Kidney health
- Global Screening for CKD
 - Challenges and Opportunities

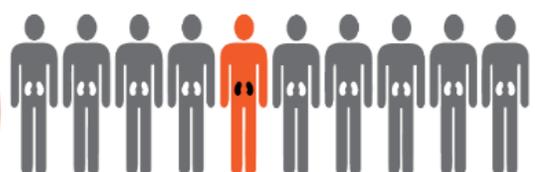

What we know CKD is a Public Health problem

- CKD increasingly recognized in multiple countries

YOU COULD HAVE KIDNEY DISEASE AND NOT EVEN KNOW IT.

1/10 people in BC are affected by kidney disease

KIDNEY HEART SMART = SMART
an initiative of **BCRenal**

Take the free assessment at kidneysmart.com

The burden of CKD has moved from 35th to 19th place over in less than 25 yrs

Global, regional, and national age-sex specific all-cause and cause-specific mortality for 240 causes of death, 1990–2013: a systematic analysis for the Global Burden of Disease Study 2013

The Lancet Volume 385, Issue 9963, Pages 117-171 (January 2015)

1990 mean rank (95% UI)		2013 mean rank (95% UI)		Median % change
1.0 (1 to 1)	1 Lower respiratory infections	1	1 Ischaemic heart disease	1.0 (1 to 1) 31% (24 to 41)
2.0 (2 to 2)	2 Diarrhoeal diseases	2	2 Lower respiratory infections	2.3 (2 to 3) -48% (-54 to -43)
3.0 (3 to 4)	3 Preterm birth	3	3 Cerebrovascular disease	2.7 (2 to 3) 24% (18 to 32)
4.0 (4 to 4)	4 Ischaemic heart disease	4	4 Diarrhoeal diseases	5.5 (4 to 8) -62% (-66 to -57)
5.1 (5 to 6)	5 Cerebrovascular disease	5	5 Road injuries	5.9 (4 to 8) 15% (2 to 23)
6.4 (5 to 9)	6 Neonatal encephalopathy	6	6 HIV/AIDS	6.0 (4 to 8) 344% (245 to 444)
7.5 (6 to 9)	7 Tuberculosis	7	7 Preterm birth	6.3 (4 to 9) -53% (-59 to -45)
8.0 (6 to 10)	8 Malaria	8	8 Malaria	6.9 (4 to 10) -5% (-26 to 24)
8.9 (6 to 11)	9 Congenital anomalies	9	9 Neonatal encephalopathy	8.7 (6 to 11) -26% (-38 to -11)
9.6 (8 to 11)	10 Road injuries	10	10 Congenital anomalies	10.3 (8 to 12) -18% (-33 to -4)
11.5 (11 to 13)	11 COPD	11	11 Tuberculosis	11.1 (10 to 12) -31% (-40 to -24)
12.2 (7 to 18)	12 Measles	12	12 COPD	11.3 (10 to 12) -1% (-9 to 9)
13.5 (12 to 18)	13 Drowning	13	13 Cirrhosis	13.4 (13 to 15) 36% (28 to 45)
14.5 (12 to 18)	14 Protein-energy malnutrition	14	14 Self-harm	14.4 (13 to 16) 9% (-3 to 24)
15.0 (12 to 17)	15 Meningitis	15	15 Lung cancer	15.0 (14 to 16) 39% (31 to 48)
15.9 (14 to 18)	16 Self-harm	16	16 Neonatal sepsis	15.7 (12 to 22) 6% (-16 to 38)
17.1 (12 to 25)	17 Neonatal sepsis	17	17 Diabetes	17.2 (16 to 19) 67% (59 to 77)
18.0 (17 to 19)	18 Cirrhosis	18	18 Protein-energy malnutrition	17.9 (16 to 22) -28% (-40 to -15)
18.5 (12 to 21)	19 Tetanus	19	19 Chronic kidney disease	20.6 (19 to 25) 90% (74 to 103)
19.6 (18 to 21)	20 Lung cancer	20	20 Drowning	20.7 (16 to 24) -46% (-54 to 3)
21.4 (20 to 23)	21 Maternal disorders	21	21 Liver cancer	21.1 (19 to 24) 42% (26 to 58)
22.7 (16 to 33)	22 Syphilis	22	22 Interpersonal violence	21.2 (18 to 27) 10% (2 to 21)
23.5 (21 to 30)	23 Interpersonal violence	23	23 Meningitis	22.9 (19 to 26) -43% (-53 to -33)
24.1 (23 to 26)	24 Stomach cancer	24	24 Hypertensive heart disease	24.5 (20 to 29) 56% (33 to 75)
25.2 (22 to 29)	25 Fire and heat	25	25 Stomach cancer	25.0 (23 to 27) -2% (-9 to 5)
26.8 (25 to 29)	26 Diabetes	26	26 Maternal disorders	26.1 (24 to 29) -23% (-32 to -12)
28.4 (23 to 34)	27 HIV/AIDS	27	27 Colorectal cancer	27.9 (26 to 30) 44% (38 to 49)
28.6 (22 to 33)	28 Asthma	28	28 Falls	28.8 (26 to 33) 18% (-14 to 40)
28.7 (27 to 32)	29 Liver cancer	29	29 Alzheimer disease	29.3 (27 to 31) 89% (81 to 103)
31.3 (28 to 35)	30 Other cardiovascular	30	30 Breast cancer	31.9 (30 to 35) 37% (28 to 46)
32.6 (28 to 36)	31 Falls	31	31 Cardiomyopathy	33.3 (30 to 38) 32% (14 to 47)
33.2 (29 to 39)	32 Rheumatic heart disease	32	32 Asthma	33.7 (27 to 37) -22% (-35 to -4)
33.4 (22 to 48)	33 Typhoid fever	33	33 Other cardiovascular	33.7 (30 to 37) -12% (-17 to 4)
34.3 (29 to 39)	34 Hypertensive heart disease	34	34 Fire and heat	34.5 (30 to 38) -35% (-46 to -15)
35.6 (25 to 46)	35 Iron-deficiency anaemia	35	35 Syphilis	34.8 (25 to 46) -46% (-57 to -33)
35.8 (33 to 40)	36 Chronic kidney disease	36	36 Sickle cell	35.0 (17 to 63) 42% (8 to 138)
37.2 (19 to 61)	37 Whooping cough	37	37 Typhoid fever	35.7 (24 to 52) -13% (-27 to 1)
37.2 (35 to 39)	38 Colorectal cancer	38	38 Oesophageal cancer	37.2 (34 to 40) 31% (18 to 48)
38.6 (36 to 41)	39 Leukaemia	39	39 Leukaemia	38.7 (37 to 41) -9% (-16 to -3)
41.0 (36 to 45)	40 Peptic ulcer disease	40	40 Interstitial lung disease	40.8 (36 to 48) 86% (26 to 194)
41.3 (38 to 44)	41 Breast cancer	41	41 Rheumatic heart disease	41.9 (37 to 48) -37% (-44 to -26)
41.3 (37 to 46)	42 Cardiomyopathy	42	42 Peptic ulcer disease	43.8 (40 to 51) -20% (-36 to -6)
43.3 (33 to 53)	43 Pulmonary aspiration	43	43 Measles	43.8 (30 to 62) -83% (-90 to -68)
44.9 (42 to 48)	44 Alzheimer's disease	44	44 Pancreatic cancer	44.2 (42 to 48) 74% (67 to 80)
45.8 (42 to 49)	45 Oesophageal cancer	45	45 Iron-deficiency anaemia	45.2 (36 to 59) -37% (-52 to -21)
46.1 (24 to 71)	46 Sickle cell	46	46 Cervical cancer	46.2 (42 to 54) 14% (4 to 23)
48.4 (40 to 54)	47 Poisonings	47	47 Brain cancer	47.1 (42 to 54) 27% (10 to 40)
49.2 (38 to 79)	48 Unintentional suffocation	48	48 Pulmonary aspiration	47.4 (39 to 59) -22% (-40 to 18)
49.2 (44 to 59)	49 Encephalitis	49	49 Endocrine, metabolic, blood, and immune disorders	48.4 (43 to 54) 29% (7 to 49)
49.3 (44 to 54)	50 Epilepsy	50	50 Lymphoma	49.6 (45 to 55) 43% (23 to 57)
53 Cervical cancer		52	52 Epilepsy	
57 Brain cancer		58	58 Whooping cough	
58 Endocrine, metabolic, blood, and immune disorders		59	59 Encephalitis	
62 Lymphoma		60	60 Poisonings	
64 Interstitial lung disease		69	69 Tetanus	
66 Pancreatic cancer		77	77 Unintentional suffocation	

Group 1
Non-communicable
Injuries

International estimates of CKD are consistent ~ 10-16% of adults

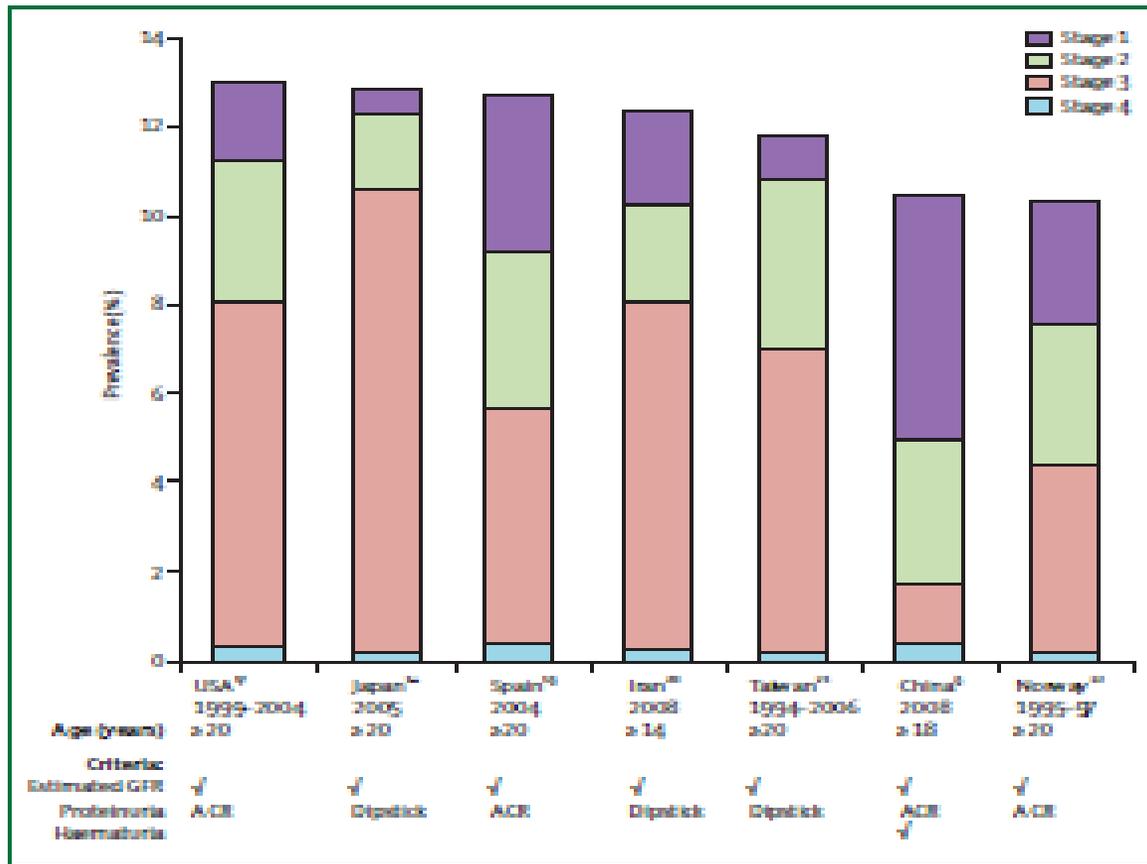

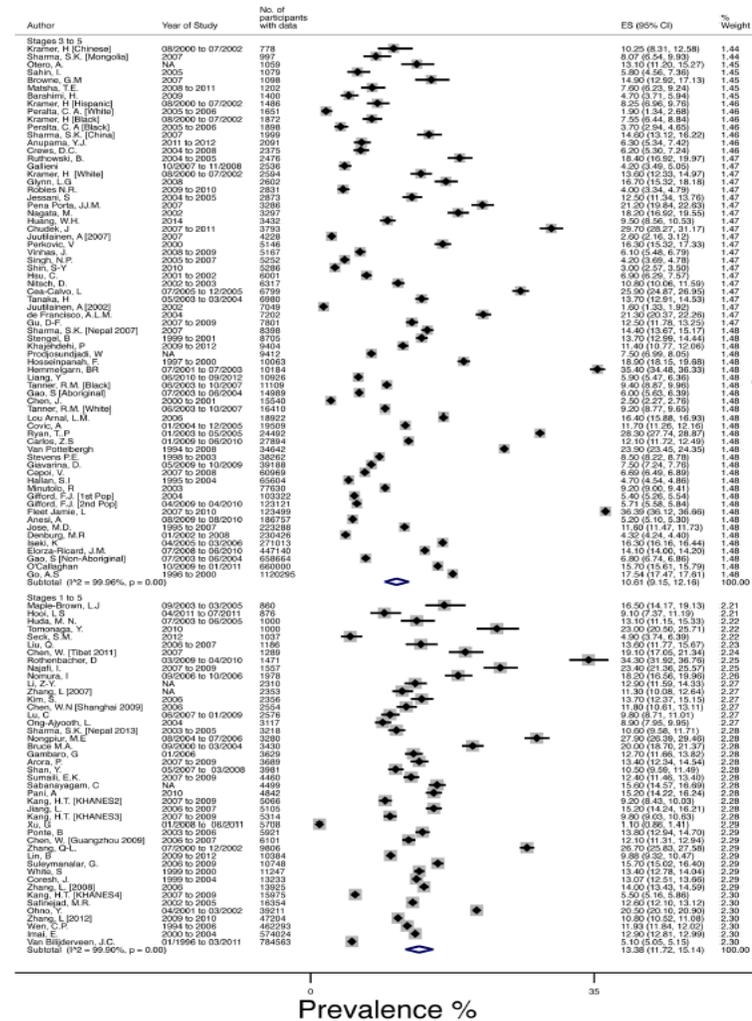

Figure 1: Population-based estimates of prevalence of chronic kidney disease. ACE=albumin-to-creatinine ratio, GFR=glomerular filtration rate.

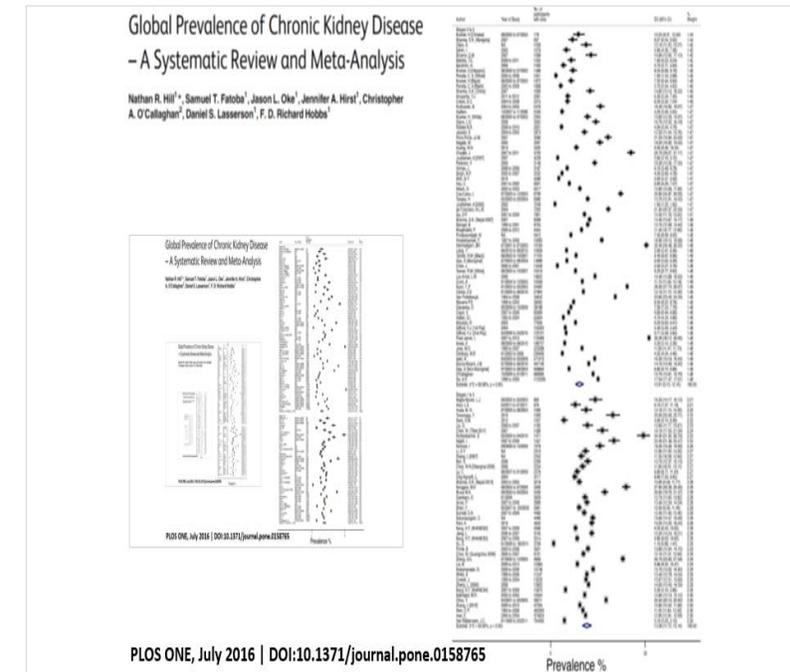

CKD prevalence
13.4% (11.7-15.1%)

Newer estimates of prevalence:

Global Prevalence of Chronic Kidney Disease – A Systematic Review and Meta-Analysis

Nathan R. Hill^{1*}, Samuel T. Fatoba¹, Jason L. Oke¹, Jennifer A. Hirst¹, Christopher A. O'Callaghan², Daniel S. Lasserson¹, F. D. Richard Hobbs¹

- Methods: A systematic review and meta-analysis of observational studies estimating CKD prevalence in general populations; pooled data using a random effects model.
- Results: 100 studies of diverse quality; 6,908,440 patients.
- Global mean (95%CI) CKD prevalence of 5 stages
 - 13.4%(11.7–15.1%), and stages 3–5 was 10.6%(9.2–12.2%)
 - Weighting by study quality did not affect prevalence estimates.
 - Stage-1 (eGFR>90 +ACR>30): 3.5% (2.8–4.2%);
 - Stage-2 (eGFR 60–89+ACR>30): 3.9% (2.7–5.3%);
 - Stage-3 (eGFR 30–59): 7.6% (6.4–8.9%);
 - Stage-4 = (eGFR 29–15): 0.4% (0.3–0.5%); and
 - Stage-5 (eGFR<15): 0.1% (0.1–0.1%).

Chronic kidney disease and cardiovascular risk in six regions of the world (ISN-KDDC): a cross-sectional study

Bogdan Ene-Iordache, Norberto Perico, Boris Bikbov*, Sergio Carminati, Andrea Remuzzi, Annalisa Perna, Nazmul Islam, Rodolfo Flores Bravo, Mirna Aleckovic-Halilovic, Hequn Zou, Luxia Zhang, Zaghloul Gouda, Irma Tchokhonelidze, Georgi Abraham, Mitra Mahdavi-Mazdeh, Maurizio Gallieni, Igor Codreanu, Ariunaa Togtokh, Sanjib Kumar Sharma, Puru Koirala, Samyog Uprety, Ifeoma Ulasi, Giuseppe Remuzzi*

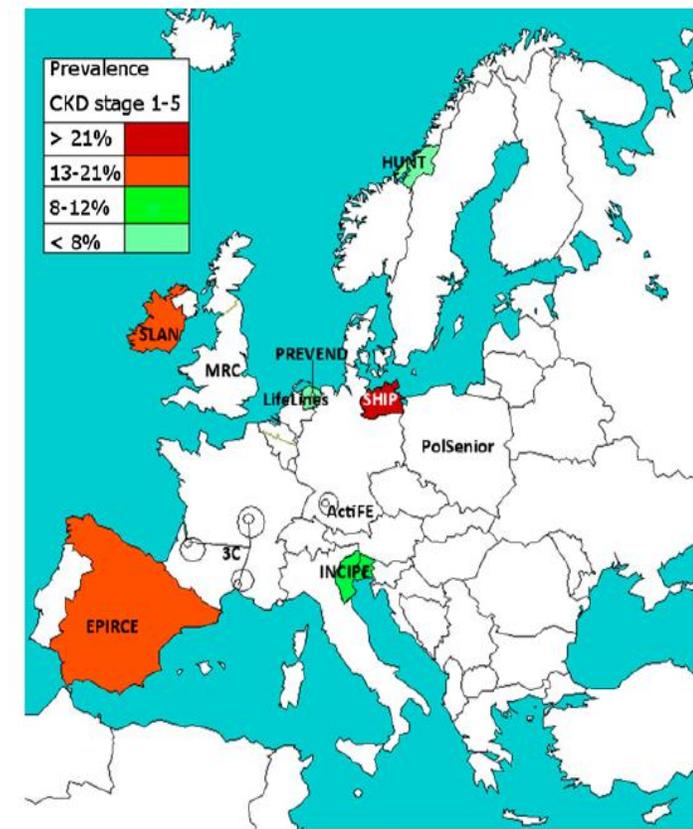

- **Design: Cross-sectional study in 12 countries from six world regions: Bangladesh, Bolivia, Bosnia and Herzegovina, China, Egypt, Georgia, India, Iran, Moldova, Mongolia, Nepal, and Nigeria.**
 - Volunteers in screening programs & high risk clinics
- **Results: CKD prevalence (N=75 058)**
 - **14·3%** (95% CI 14·0–14·5) in general populations
 - **36·1%** (34·7–37·6) in high-risk populations.
 - Awareness very low:
 - CKD 6% in general populations; 10% in high-risk populations
 - Awareness also low for HTN 56% and DM 69%

CKD Prevalence Varies across the European General Population

Katharina Brück,^{*} Vianda S. Stel,^{*} Giovanni Gambaro,[†] Stein Hallan,[‡] Henry Völzke,[§] Johan Ärnlöv,^{||} Mika Kastarinen,[¶] Idris Guessous,^{**} José Vinhas,^{††} Bénédicte Stengel,^{‡‡} Hermann Brenner,^{§§} Jerzy Chudek,^{||||} Solfrid Romundstad,^{¶¶} Charles Tomson,^{***} Alfonso Otero Gonzalez,^{†††} Aminu K. Bello,^{‡‡‡} Jean Ferrieres,^{§§§} Luigi Palmieri,^{|||||} Gemma Browne,^{¶¶¶} Vincenzo Capuano,^{****} Wim Van Biesen,^{††††} Carmine Zoccali,^{‡‡‡‡} Ron Gansevoort,^{§§§§} Gerjan Navis,^{||||||} Dietrich Rothenbacher,^{¶¶¶¶} Pietro Manuel Ferraro,[†] Dorothea Nitsch,^{*****} Christoph Wanner,^{†††††} Kitty J. Jager,^{*} and on behalf of the European CKD Burden Consortium

- **Methods:** Collected **data** from 19 general-population studies from 13 European countries.
 - KDIGO stages; CKD-Epi eGFR; ACR 30-299, 300+; age- and sex-standardized (EU27).
- **Results:** Adjusted CKD prevalence
 - Stages 1-5: 3.3%(3.3%-3.3%) in Norway TO 17.3% (16.5%-18.1%) in northeast Germany.
 - Stages 3–5: 1.0% (0.7%-1.3%) in central Italy TO 5.9% (5.2%-6.6%) in northeast Germany
- Variation stratified by diabetes, hypertension, and obesity status followed the same pattern as the overall prevalence.
- **Conclusion:** Identified substantial variation in CKD prevalence that appears to be due to factors other than the prevalence of diabetes, hypertension, and obesity.
- **Advantage:** **Individual** data pooling

Prevalence of Diabetes and HTN is increasing around the world

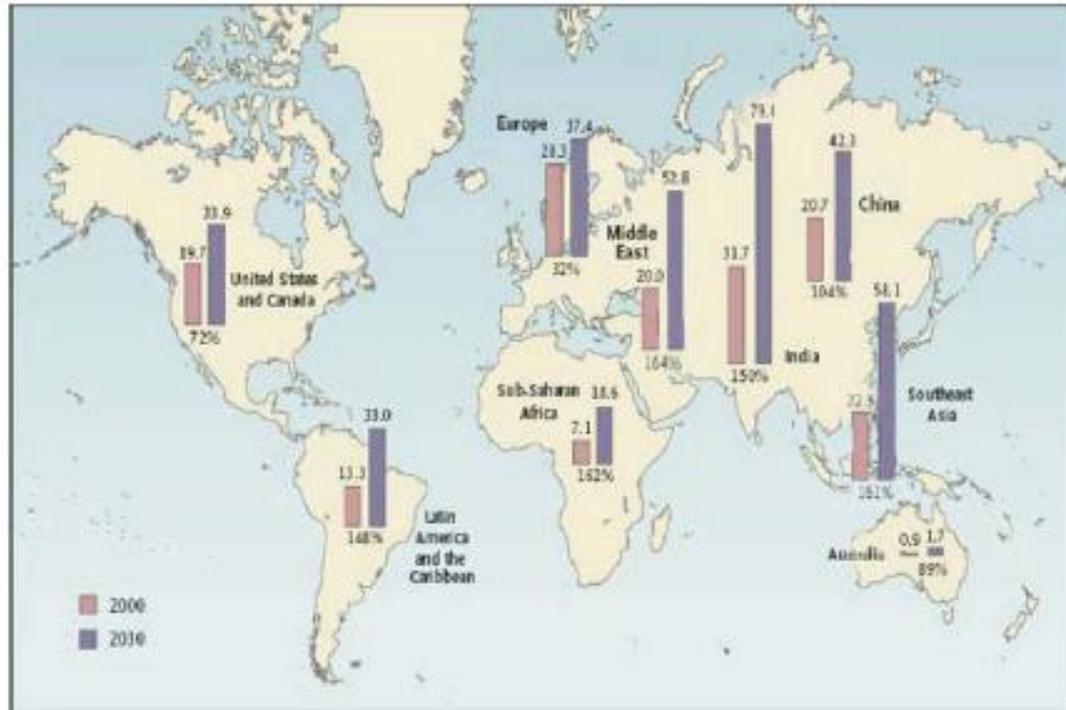

Figure 3. Global prevalence of diabetes mellitus (2000 and 2030). Reprinted with permission from Hossain et al.²⁸

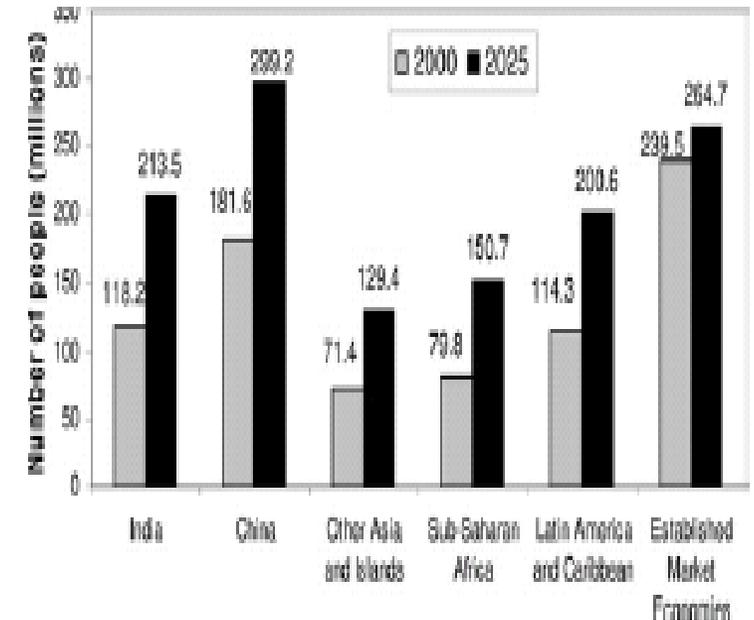

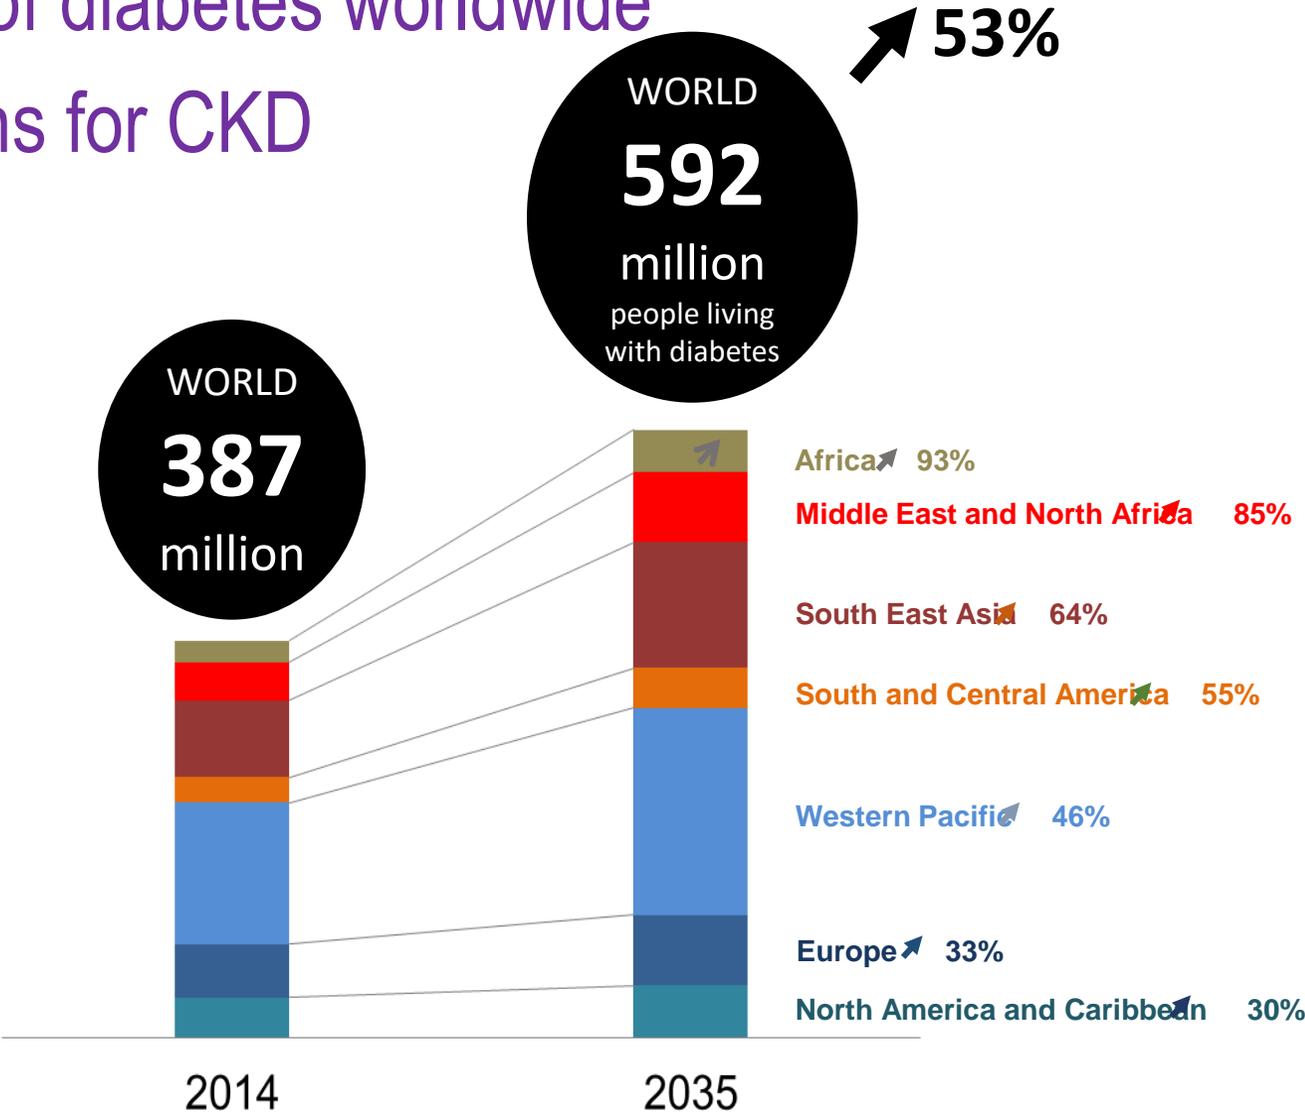

Figure 4. Global prevalence of hypertension (2000 and 2025).

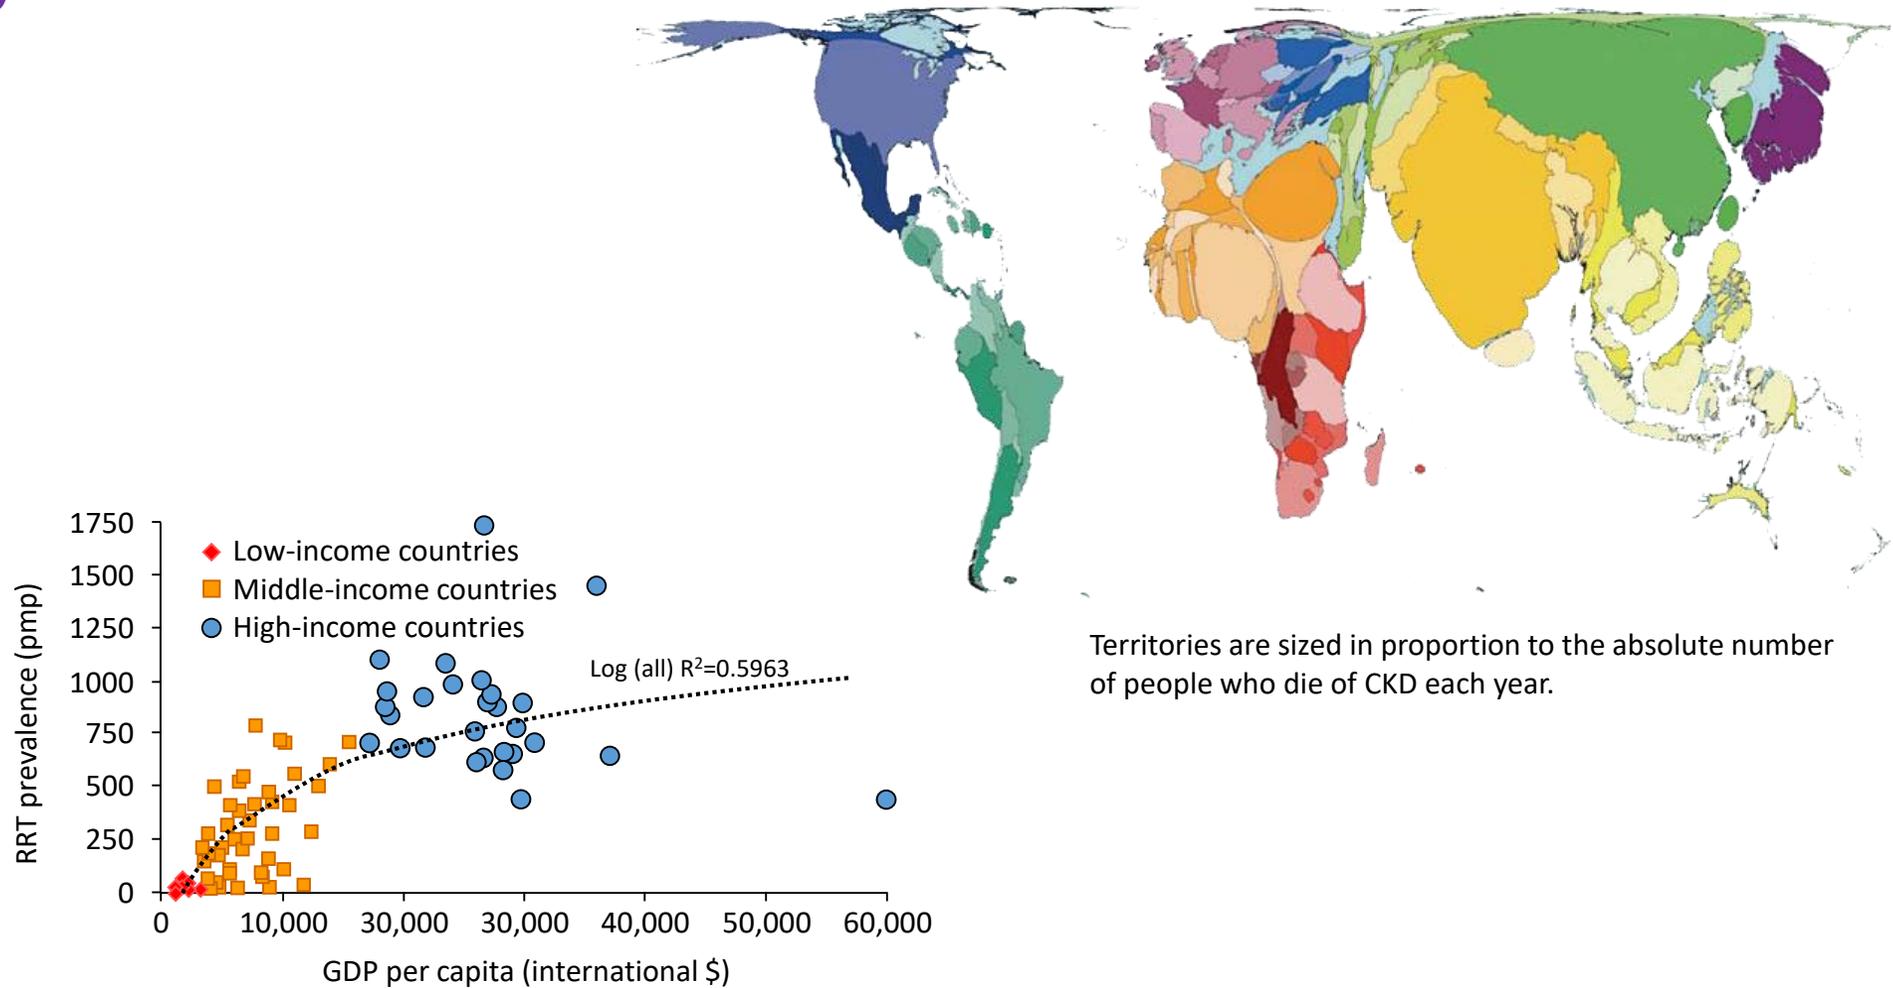

Increasing prevalence of diabetes worldwide

? Implications for CKD

The clinical problem

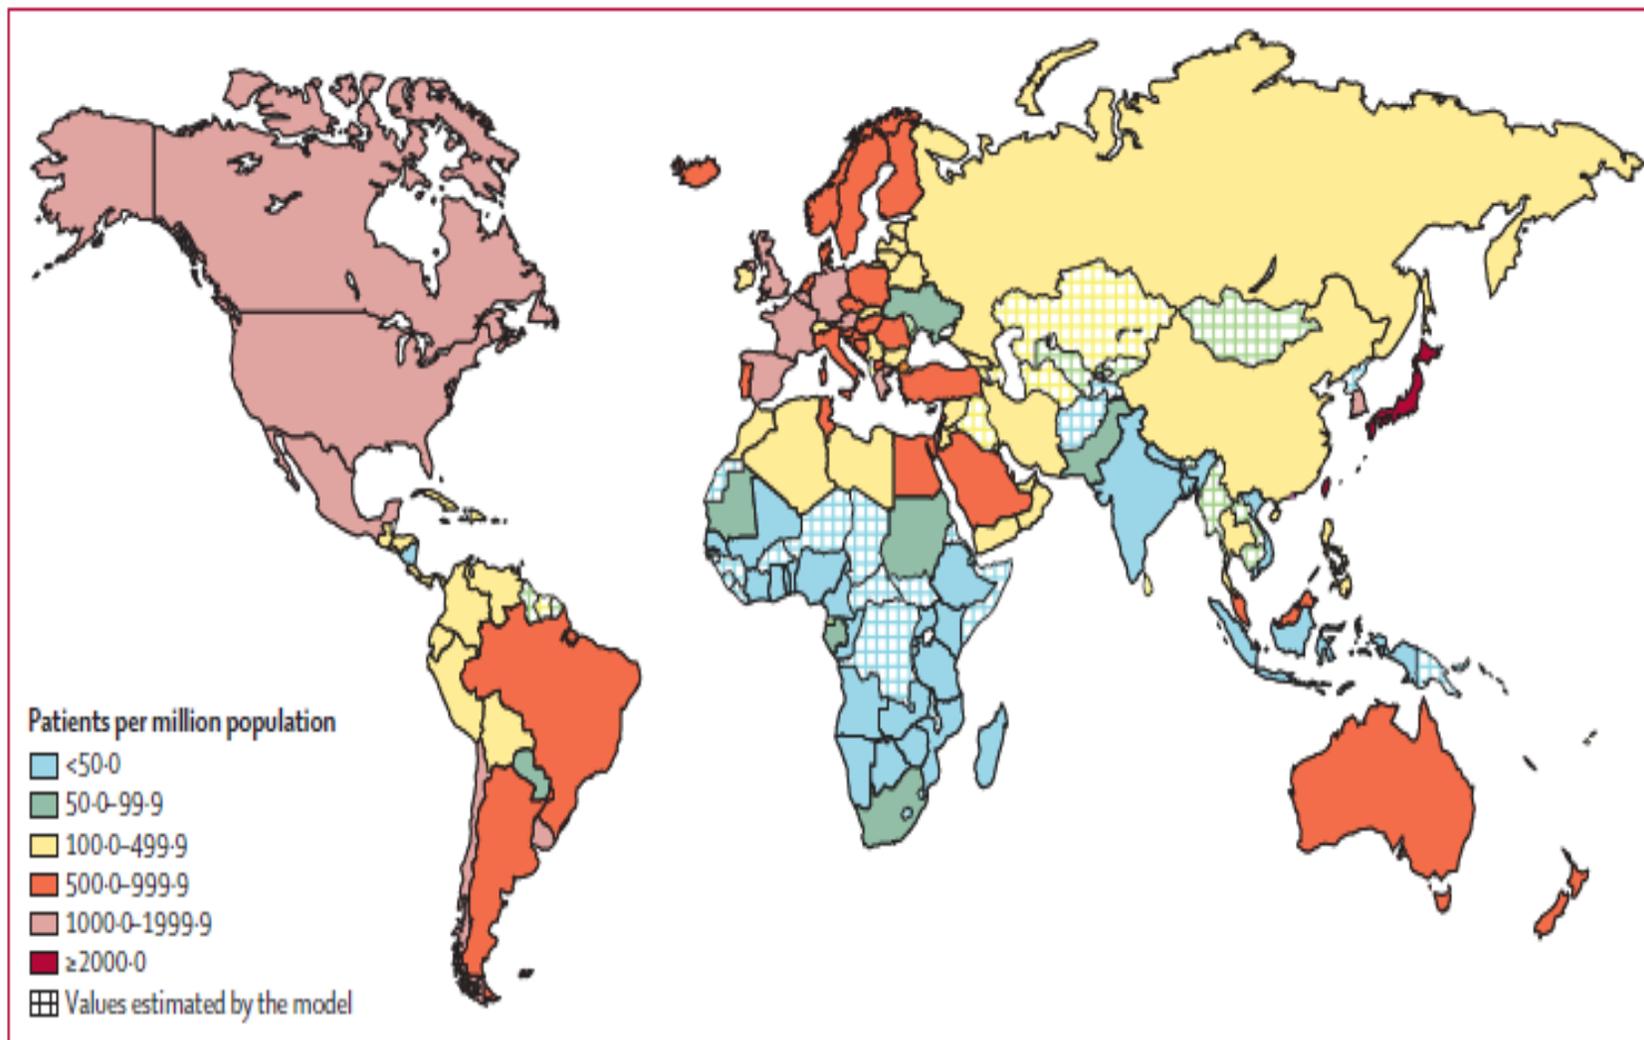

We have made little progress where RRT is available only to the most fortunate

Many people do not receive RRT

Global RRT 2010 : Unmet Needs

Estimates 27-53% of patients needing RRT receive RRT

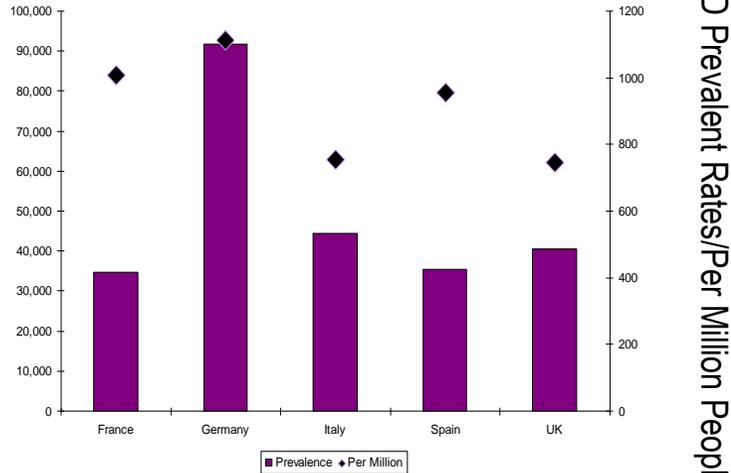

Variability in care globally

- Access to prevention and treatment
- Access to dialysis
- Access to transplantation
- Access to trained nephrologists

Variable Prevalence of Dialysis & differential uptake of modalities

Among the big five European countries, Germany has the highest prevalence of ESRD and Italy has the lowest

ESRD Prevalent Counts/Number of Patients

ESRD Prevalent Rates/Per Million People

* ESRD as dialysis and may be driven by availability and economic concerns

Variability in workforce Nephrologists distribution pmp

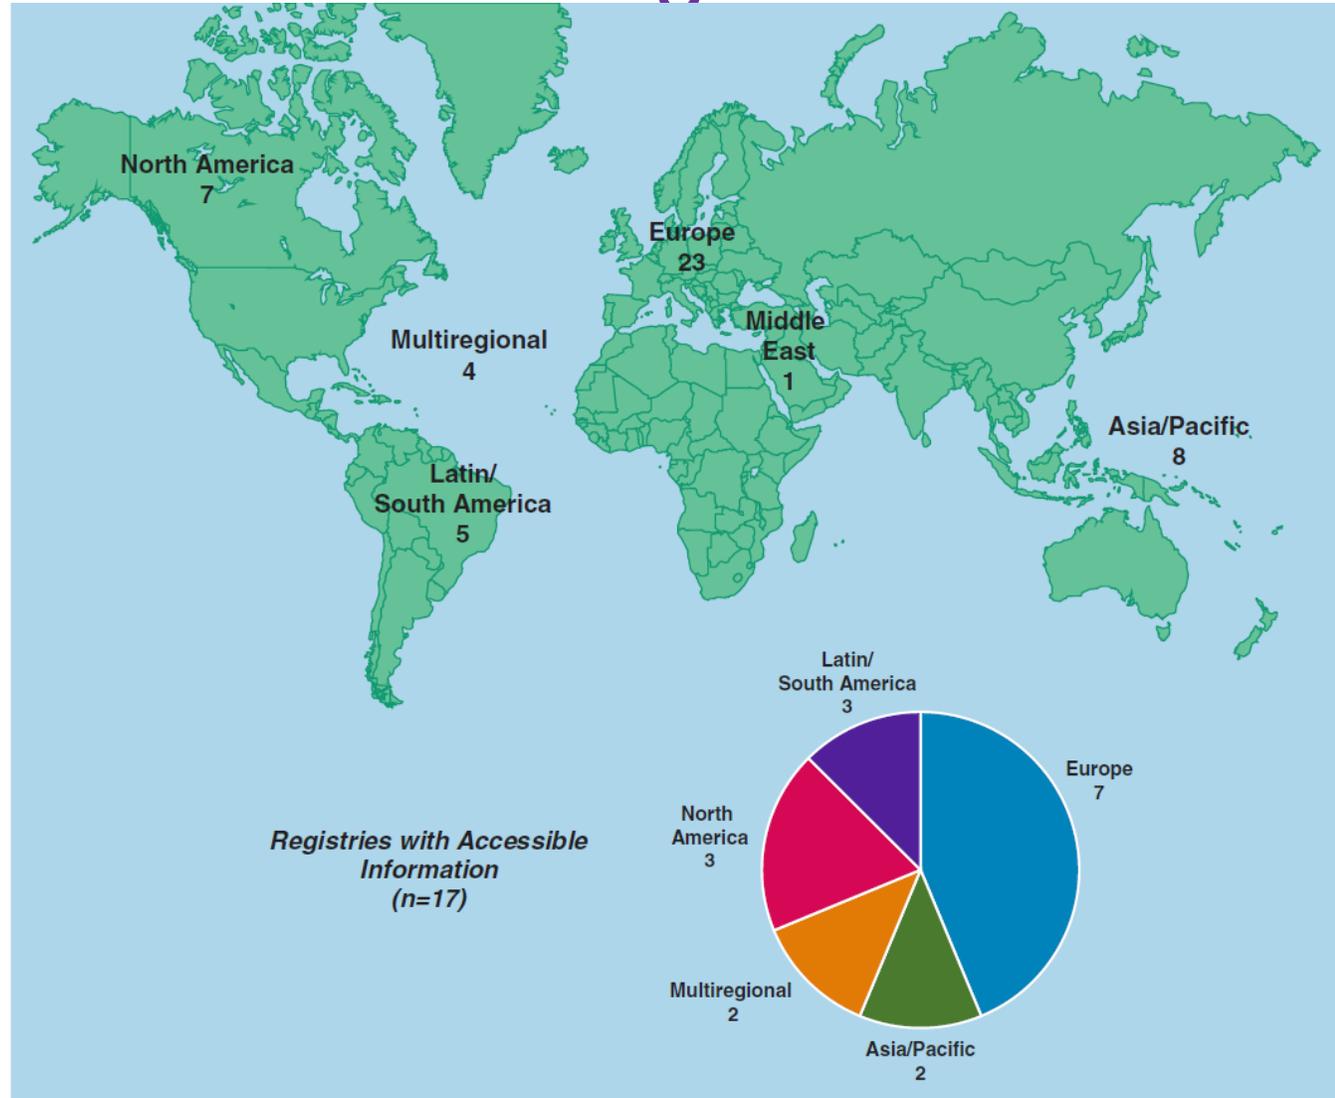

Nephrologists distribution, pmp: How countries compare within Middle East

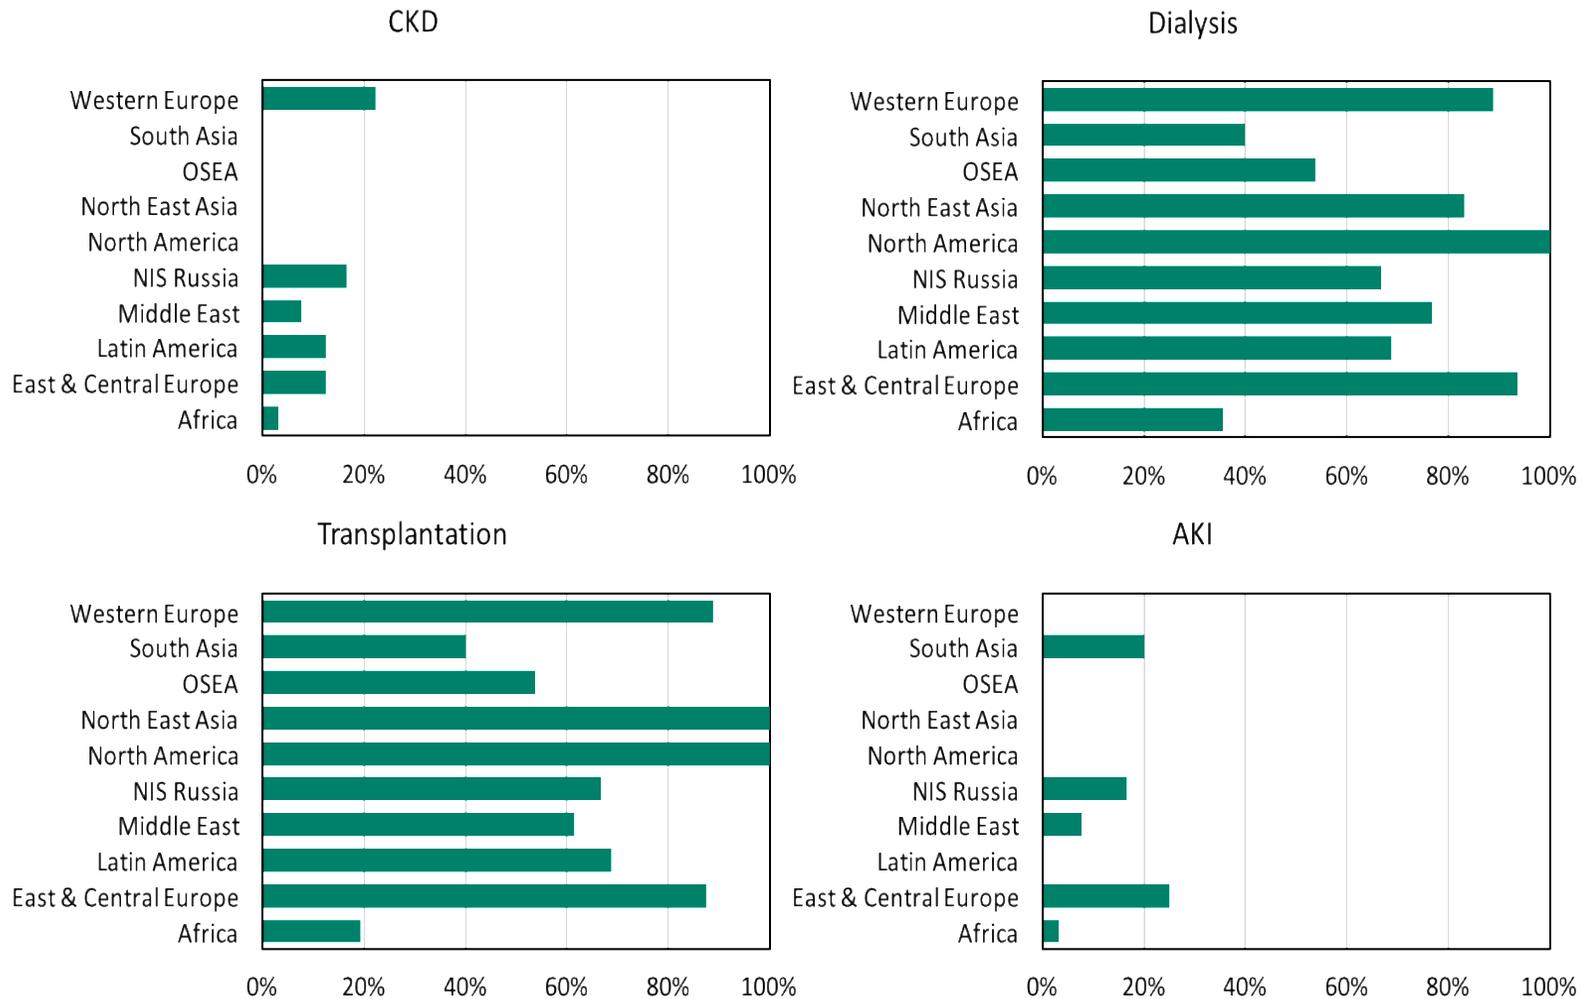

Middle East

There are few Renal Registries around the world

GKHA: Variability in the Availability of renal registries for CKD, Dialysis, Tx and AKI around the world:

CKD – Global perspective

- Common, harmful, treatable
- Linked to other NCDs (DM, HTN, CVD)
- Variability in approaches, resources, policies
 - Between and within countries and regions
- Role of health care systems
 - in prevention and control of CKD prevention
 - in integrating with national and international NCD management strategies
- Need for better understanding and unified advocacy approach to CKD

Universal Health Coverage :

#3 Sustainable Development Goals

- The United Nations Sustainable Development Goals that all UN Member States have agreed to try to achieve Universal Health Coverage by 2030.
- This includes
 - financial risk protection,
 - access to quality essential health-care services and
 - access to safe, effective, quality and affordable essential medicines and vaccines for all

World Health Organization

WHAT DO YOU NEED TO GET, BE AND STAY HEALTHY?

CAN YOU GET HELP FROM A WELL-TRAINED HEALTH WORKER?

CAN YOU GET TREATMENT THAT HELPS YOU GET BETTER, AND IS SAFE?

CAN YOU GET THE MEDICINES AND OTHER HEALTH PRODUCTS YOU NEED?

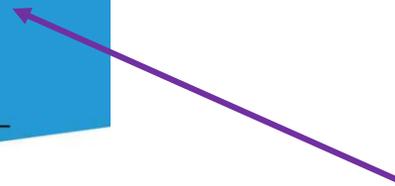

WHO WILL PAY FOR IT?

ARE THERE POLICIES IN PLACE TO MAKE QUALITY SERVICES AVAILABLE TO EVERYONE, EVERY TIME?

DOES YOUR GOVERNMENT HAVE THE INFORMATION IT NEEDS TO MAKE THE RIGHT DECISIONS ABOUT THE WHOLE SYSTEM?

THE WORLD HEALTH ORGANIZATION IS WORKING AROUND THE WORLD SO THAT ALL PEOPLE AND COMMUNITIES RECEIVE THE QUALITY SERVICES THEY NEED, AND ARE PROTECTED FROM HEALTH THREATS, WITHOUT SUFFERING FINANCIAL HARDSHIP.

THAT'S WHAT WE CALL UNIVERSAL HEALTH COVERAGE

WWW.WHO.INT/UHC

Six components of Universal Health Care

1. **Health financing** – funding mechanisms for CKD and AKI care (incl RRT)
2. **Service delivery and safety** - infrastructures for kidney care
3. **Health workforce** – essential for CKD and AKI care
4. **Essential medications and technology access (medicines and RRT technologies)** - availability, reach, and access
5. **HIS and statistics** – information systems, registries, surveillance systems
6. **Governance and policies** – frameworks, guidelines, position papers, etc

Screening for CKD: Challenges and Opportunities

“There is often naïve
enthusiasm for screening.”

- Professor Daniel Levy
Harvard School of Public Health

Why screening is often less helpful than expected

Unrealistic expectations

- theory
- biased observational data

Toll

- costs and consequences of needing to screen everyone

False + and False Neg tests

- unnecessary testing
- missed opportunities

Lack of benefit in Target Population

- ineffective or sub-optimally effective intervention

Screening : positives and negatives

- Patient Perspective

- Early detection
- Early institution of delay strategies
- Preparation for RRT
 - Living donor outreach
 - Home based dialysis therapies
- Prolonged anxiety and uncertainty
- Poor outcomes if no resources

- Societal Perspective

- Burden of disease known
- Planning of health care resources and workforce
- Advocacy for resources
- Prolonged anxiety re: costs of expensive care and resource utilization
- Poor outcomes if no resources

Wilson-Jungner principles: applicability to screening for CKD

	Developed countries		Developing countries	
	General population	Case finding	General population	Case finding
1. Condition should be an important health issue	✓	✓	✓	✓
2. There should be effective treatment for patients with recognized disease	✓	✓	✓	✓
3. Facilities for diagnosis and treatment should be available	✓	✓	✗	Not universal
4. There should be a recognizable latent or early stage	✓	✓	✓	✓
5. There should be a suitable test	✓	✓	✓	✓

Wilson-Jungner principles: applicability to screening for CKD

	Developed countries		Developing countries	
	General population	Case finding	General population	Case finding
6. The test should be acceptable to the population	✓	✓	✓	✓
7. The natural history of disease should be understood	✗	✓	✗	✗
8. There should be an agreed policy on whom to treat as patients	✓	✓	✓	✓
9. The cost of case finding (including diagnosis and treatment of patients diagnosed) should be economically acceptable	✗	✓	✗	?
10. Case finding should be a continuing process	Feasibility uncertain	Feasible	Not feasible	Feasibility uncertain

Focus on patients at the highest risk

“case-finding” rather than screening

*CKD: Current State of Screening and Unanswered Questions

- Targeted screening (case finding) of high risk populations is recommended
 - *What is the status across the globe for screening and surveillance?*
 - *Optimal strategies for targeted screening are unclear*
- Population based screening:
 - *not been shown to be cost-effective when only prevention of ESRD considered*
 - *? be cost-effective when screening is based on albuminuria and prevention of CKD related CVD considered*
- Primary care involvement and use of electronic health records is key to early detection
 - *How do we classify case identification by EMRs and other strategies and would it specifically replace GP CKD screening?*
 - *What is the feasibility of using these systems across the globe?*

CKD Screening: Current Gaps

- Regional and international estimates of CKD prevalence and incidence are limited, especially for LMIC ?
- Optimal strategies are to engage primary care providers in early detection of CKD (targeted high risk screening) ?
- What is the variability in estimation of eGFR (and ACR) by ethnic groups? *(i.e. the ancestry coefficient in the eGFR equation)*
- Should screening include albuminuria and hematuria in combination ?

Opportunities and challenges

- Increase awareness of the importance of early CKD for health.
- Awareness will lead to better screening and consequently to better prevalence and incidence data.
- What are the opportunities and challenges of collaborative studies?
 - *Disadvantaged population eGFR epidemiology study (DEGREE; Ben Caplin UK; universal protocol to assess kidney function in disadvantaged populations);*
 - *iNET CKD: International CKD cohort studies network; and*
 - *H3 (Study of CKD in Africa)*
- Global consortia, including the CKD Prognosis Consortium:
 - Use to share information about optimal study design, analysis and reporting
 - Plans for collection of better data in the future

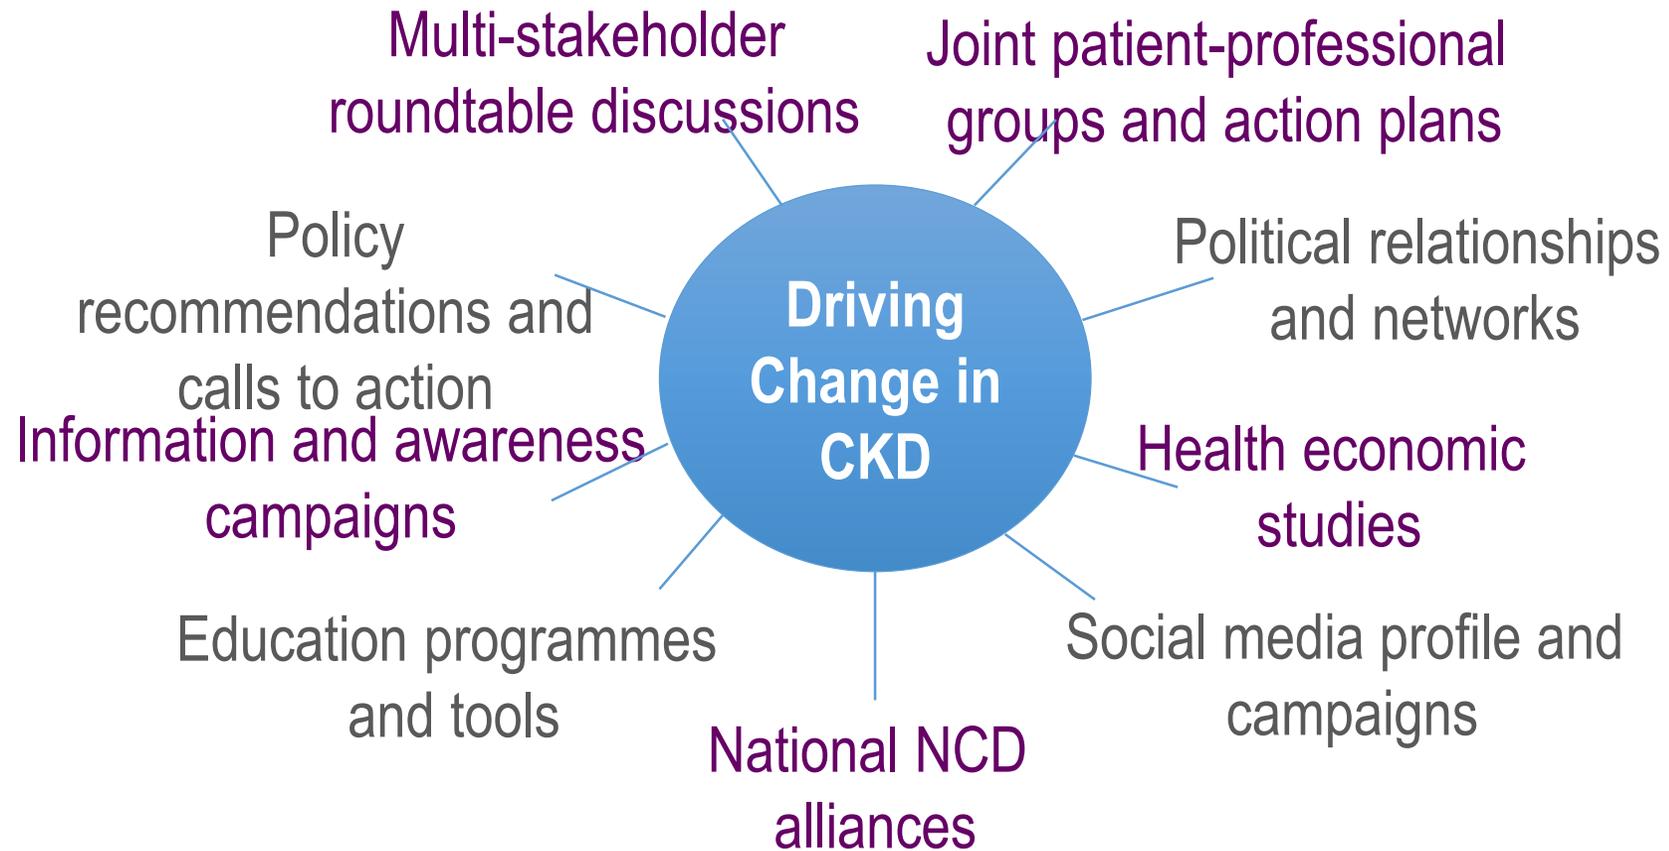

**adapted from Vancouver Global Kidney Health Summit WG*

Diversity of the human condition

- Culture
- Resources
- Access to care
- Access to education
- Perspectives
 - Patients
 - Providers
 - Funders

Advocacy in CKD :What can we learn from other disease groups?

Summary: Is there a global need for Screening for CKD?

- CKD is a global problem
 - Prevalent: variation in data and estimates problematic
 - Multiplier of risk for common conditions (CVD, DM)
 - Morbidity and mortality significant
 - Variations in Care and Access to care exist
 - Within and between countries
- Known high risk groups for CKD growing around the world
- Advocacy efforts re CKD suggest the need for more data
 - Challenges and opportunities for international collaboration
 - Country relevant contexts
- Targeted case finding (not general screening) & strategy for facilitating access to appropriate resources is needed now
